

Milestone Plan	User Story Urgency	User Story Value	User Story Priority	User Stories & Functional Requirements	Approval Status	Instructor Comments	Index (for original sorting)
	3	5	15	<b>As a mother, I want to find all the ingredients for a recipe during grocery shopping and be able to look at the recipe while I am cooking, so that I can prepare meals for my family with ease.</b>			#REF!
3				App must have search feature for the user to search for any recipes they look for. This keyword can be the title of the recipe, a step in the recipe, or even an ingredient.	Approved		#REF!
1				Spoonacular API must be able to look up the ingredients and detailed cooking instructions for a given recipe.	Approved		#REF!
3				A filter mechanism could be useful when there are a lot of research results being returned. The user should be able to limit the number of results based on certain criteria, as well as rank the results based on these criteria.	Approved		
2				Users must be able to save and retrieve shopping lists. (We are using Firebase for this) If a guest tries to save a recipe, he will be prompted to create an account or log in.	Approved		#REF!
	4	4	16	<b>As a graduate student, I cook from time to time. I usually cook a large meal once or twice a week and store the food in the fridge so that I can have enough to eat for the next several days.</b>			#REF!
2				Users must be able to save and retrieve favorite recipes to save time. (Again we are using Firebase for this) Again the user has to log in first in order to retrieve favorite recipes. To save time, the user can opt to save the username and the password on the device (this feature is provided by the device already) for automatic login.	Approved		#REF!
1				Users must be able to navigate through my app pages to use different functions of my app. Specifically, we need bottom navigation tabs to work on MainActivity with different fragments as tabs.	Approved
